# Jira Agile Scrum Lab

Peer Skill Exchange & Mentorship Network

Sai Sathvik Gullipalli | PES2UG24CS430 | Section G

I created a company-managed Scrum project in Jira with 4 Epics and 11 User Stories. The work was estimated at 58 story points and completed across two one-week sprints.

## Short Reflection

**1. Did the estimates reflect the actual effort?**

Mostly yes. Higher points were used for performance and security because they had more uncertainty. Since this was a simulation, real development work would still be needed to confirm the estimates.

**2. Was the backlog prioritized well?**

Yes. Profiles, search, and mentorship requests came first because the later session and feedback features depend on them.

**3. Did the sprints follow the plan?**

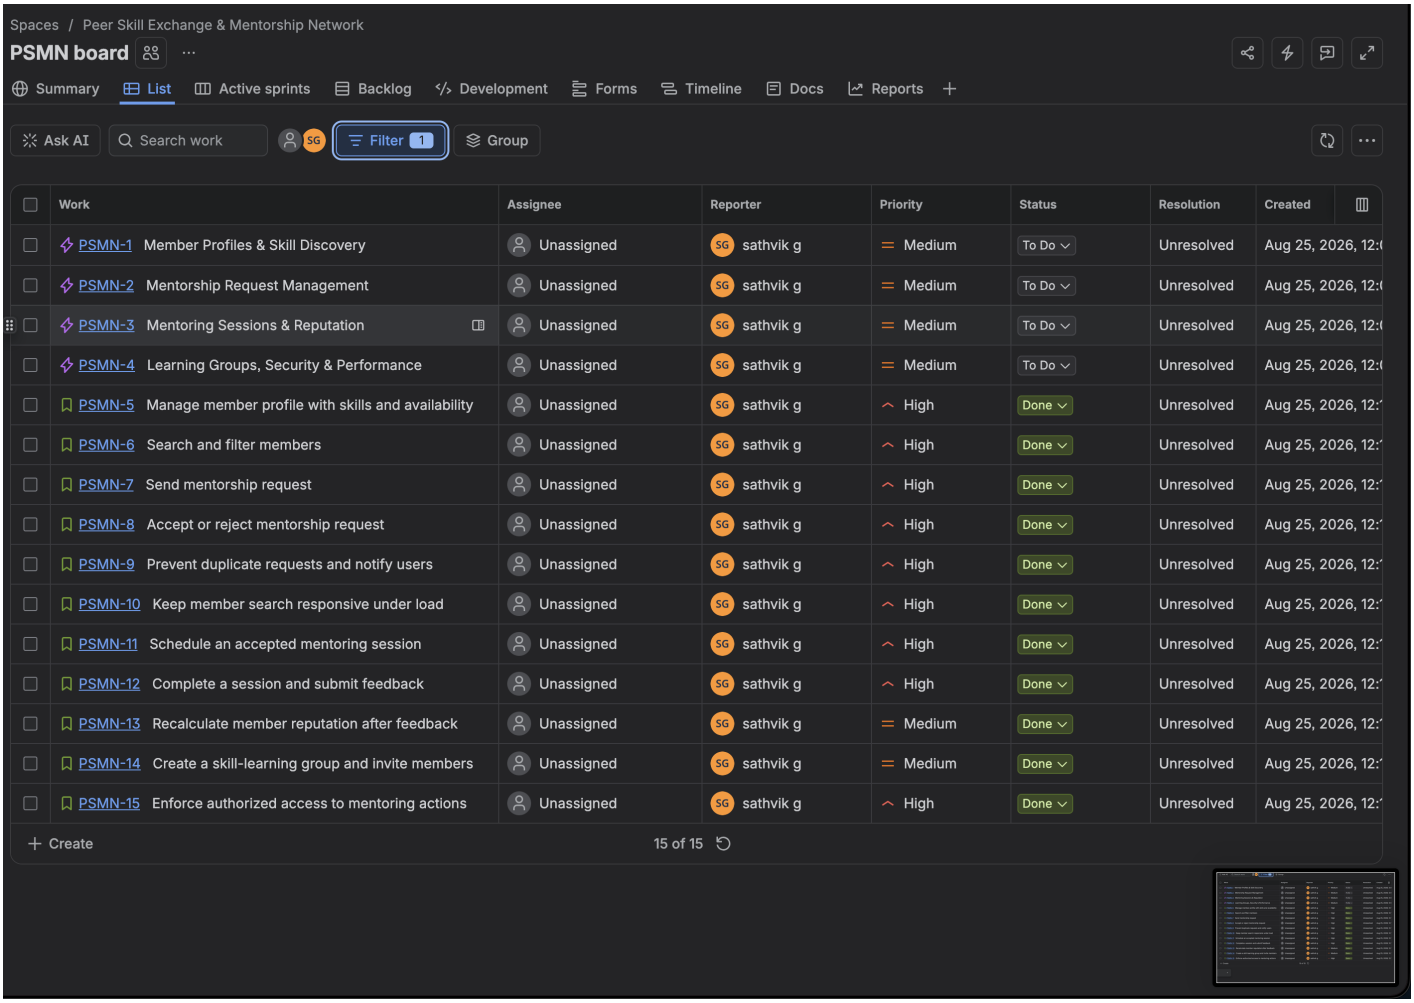

Yes. Sprint 1 completed 5 Stories for 24 points, and Sprint 2 completed 6 Stories for 34 points.

**4. What did the burndown charts show?**

Both sprints reached zero remaining points. The sharp drops happened because the work was moved quickly during the lab simulation, so the charts do not represent the capacity of a real team.

The following pages contain the required screenshots from Jira.
